TACTICAL- 200508

TACTICAL- 200503

PRODUCT OVERVIEW

Like its big brother, Cybergun's **FN FNX™-45** is available in two versions, **Civilian and Tactical**. The Tactical version differs from the Civilian by the presence of an **external barrel with a 16mm CW threaded tip**, raised mechanical sights and adapted to the use of a silencer. It is also available in two colors, black or FDE, whereas the Civilian version is only available in black color.

The replicas are all supplied with an **additional alternative butt stock** and a gas magazine with a capacity of 25 shots.

The FNX™-45 are produced under FN Herstal license and **have all the features** of the weapon they are based on. These highly realistic replicas are prized by players for their exemplary finishes and **excellent stock performances; a must-have** for any GBB or FN Herstal enthusiast, but also for players who want a quality pistol replica.

ENERGY	1 JOULE
CALIBER	6 mm
FIRE MODES	SEMI / SAFETY
VELOCITY with 0.20 g BBs	328 FPS
LENGTH	22 cm
WEIGHT (with magazine)	0.95 kg

HISTORY

The FNX™-45 is the evolution of the FNP, a range of modern semi-automatic guns designed by **FN Herstal America** starting in **2006** and available in 9x19mm, .40 S&W, .45 ACP and .357 SIG calibers.

At that time, USSOCOM had just brought together two military programs, the US Army's Future Handgun System (FHS) and the Special Operations Forces Combat Pistol. The goal was to offer a handgun for the US Armed Forces replacing the aging M9A1s, after 20 years of loyal service, with a .45 ACP chambered weapon with Picatinny rail, night/day optics and silencer. **The FNP-45**, already offered in the right caliber and with a 15-shot magazine, was then proposed by FN America.

The weapon received some **improvements**, such as **new fully ambidextrous controls** and a slightly redesigned slide and frame. After **two years of work**, the **FNX™-45** was born, in two versions: **Standard or Tactical** with threaded barrel, raised sights for the use of a **silencer** and a **compact red dot slot**.

Although the JCP program did not succeed, the **FNX™-45** was able to seduce **video game designers**, appearing among others in Ghost Recon: Wildlands, Call of Duty: Black Ops 2, Arma III, DayZ, and in movies in the hands of Sharon Carter "Agent 13" (played by Emily VanCamp) in Captain America: The Winter Soldier by Marvel studios.

DETAILS

REPLICAS :

- Replicas developed in partnership with the **exclusive worldwide FN Herstal license**;
- Just like the original weapon, this replica has a **polymer frame** and a **metal slide**. Its non-slip grip can be equipped with **alternative butt stock** for more ergonomics;
- The replica is powered by a very large capacity gas magazine offering a very good kick and an **excellent autonomy**;
- Underneath the replica is a **picatinny rail** for the addition of accessories such as a flashlight or a laser;
- The FNX™-45 are equipped with an **ambidextrous safety** located on the back of the replica, which allows the trigger to be blocked to prevent a BB from being shot;
- The FNX™-45 are also equipped with **two metal sights with a white openwork dot**, allowing you to maintain a line of sight as close as possible to the barrel and in the extension of your outstretched arms;
- You can also **add a silencer** on the Tactical versions by removing the protective ring, which reveals a 16 mm clockwise threading;
- The Tactical versions also have a removable plate on top of the slide, leaving a place **to attach a micro red dot**.

Billes 0,25gr - 123601

Included : 1 backrest, 25 BBs magazine, Allen key.

FN HERSTAL IN A FEW WORDS

In 1889, Belgium bought the rights to a brand new bolt action rifle in order to modernize its army. To produce the 150,000 weapons required, the **Fabrique Nationale d'Armes de Guerre** was created. The group was quickly designated by the name of the town where its factories were located and became the **FN Herstal**.

During the 20th century, the FN Herstal was famous for its collaboration with the American inventor **John Moses Browning**, who was later to become the mentor of the engineer **Dieudonné Saive**, the two men being at the origin of some of the most emblematic weapons in history (BAR, Browning GP, FN FAL, Browning M2...).

For 130 years, **innovation, excellence and expertise** have been the watchwords of the Herstal Group, which designs, develops and manufactures a complete range of **innovative weapons at the cutting edge of technology**, which can be found today in the fields of defense, security as well as in the civil sector.
